

In the Specification:

On page 1, prior to the first paragraph, please insert the following headings and paragraph:

--CROSS-REFERENCE TO RELATED APPLICATIONS

This application is a national phase application of International Patent Application No. PCT/NL2003/000289, filed April 15, 2003, which claims priority to Dutch Application No. NL1020385, filed April 15, 2002, which applications are incorporated herein for all purposes by reference.

BACKGROUND OF THE INVENTION--

On page 2, between lines 27 and 28, please insert the following headings and paragraphs:

--BRIEF SUMMARY OF THE INVENTION

This present invention is directed to a method for controlling a red-light camera at a traffic light of which at least a red light burns in flashing manner at a frequency that is not visible to the human eye when said red light is activated. The method includes detecting vehicles which pass through the traffic light; making at least one recording when a vehicle passes during a period in which the flashing red light of the traffic light is activated; detecting during which part of the activation period the flashing red light is actually on; and transmitting information regarding the part of the activation period during which the red light is on to the red-light camera so that the at least one recording is made in precisely that part of the activation period.

In various aspects of the invention, the red light is a light-emitting diode (LED). In various aspects of the invention, the moment that the red light comes on is detected in the case of at least some of the flashes and therefrom is determined the moment at which the at least one

recording is made. Various aspects of the present invention are directed to a device for controlling a red-light camera similar to the above.

The method of the present invention(s) have other features and advantages which will be apparent from or are set forth in more detail in the accompanying drawings, which are incorporated in and form a part of this specification, and the following Detailed Description of the Invention, which together serve to explain the principles of the present invention(s).
